## SECRETS OF THE ANIMAL WORLD REVEALED!

ANIMAL INSIDE OUT EXHIBITION AT THE MONTRÉAL SCIENCE CENTRE

**Montreal, April 14, 2016** — Put those anatomy textbooks aside and make way for the new astonishing exhibition **ANIMAL INSIDE OUT** from the highly acclaimed creators of **BODY WORLDS**.

On **April 14**, this travelling exhibition will land at the Montréal Science Centre with 50 different specimens revealing animal secrets and skills that only **Dr. Gunther von Hagens' ground-breaking Plastination technique** can bring to light. From bone and organ structures to digestive, nervous, and circulatory systems, see it all with your own eyes.

“After the outstanding success of the **BODY WORLDS** exhibition, we are very excited about offering our visitors another eye-opening exploration of the mysteries and wonders that lie beneath the skin. **ANIMAL INSIDE OUT** is a rare opportunity to understand what makes each species so unique. The exhibition reveals the physiological similarities between the animal and the human, inviting us to reflect on how inextricably linked we are with the animal world,” explains Montreal Science Centre General Director, Julie Payette.

Here's an opportunity to explore animal physiology like never before. What kind of tricks can the giraffe play with its tongue? Why do bulls wield such tremendous force? How do frogs breathe through their skin? How can the ostrich go as fast as 50km/h? All this and more in this marvellous voyage inside the animal body.

The Montréal Science Centre's exhibition also features animations surrounding two special specimens that people will be able to touch, namely, the human heart and the human arm.

Which animal secret will surprise you most? Come find out! The exhibition is up until **September 11**.
